

Serenity made simple™

Owner's Manual Supplement

Because of the continual product improvements made by Watkins Manufacturing Corporation, your Solana Spa can now be used either indoors or outdoors.

The new improvements are not reflected in the Owner's Manual; however they are stated in this supplement.

- Even though your Solana Spa has been designed for indoor use, new engineering modifications now allow you to place your Solana spa outdoors. The heater will continue to raise the spa water to the desired temperature as long as the ambient temperature remains above 20°F.
- The references made to 32°F ambient temperature as stated in the Owner's manual under "Important Spa Information" and "Heater and Hydromassage Systems" should be disregarded.
- One of the changes made to the Solana was the addition of a new weather resistant base pan. Due to the installation of this base pan, the support braces are no longer visible from beneath the spa as illustrated in the Spa Leveling Instructions. An easy to find dimple has been molded into the base pan at each leveling point, these five leveling points are currently illustrated in the Owner's Manual.
- During the installation of the power cord, the bottom screw attached to the side panel (on the equipment compartment side) must be removed in order to tuck the power cord behind the side panel. Replace the screw once the power cord is properly positioned.
